OIL and GREASE SEALS

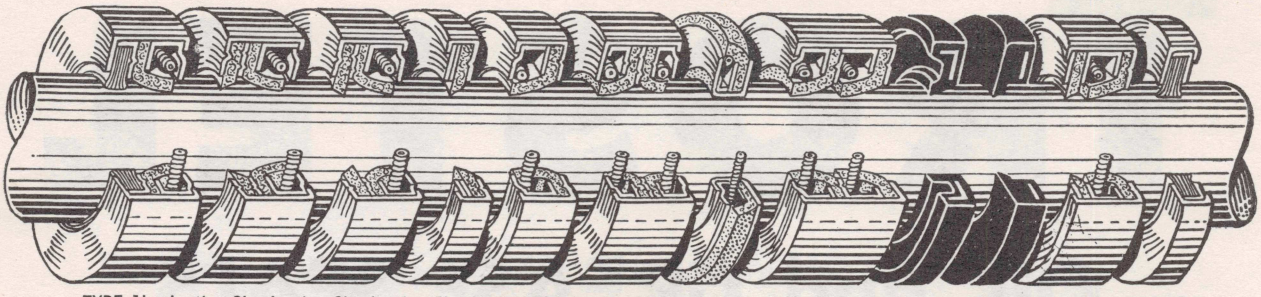

SIZE CHART

ALBERT TROSTEL PACKINGS, LTD.

LAKE GENEVA, WISC.

Group A—Plain Round

TYPE 1L—Leather 2L—Leather 3L—Leather 5L—Leather 7L—Leather 8L—Leather 9L—Leather 34—Rubber 24—Rubber 27—Leather 29F—Felt
TYPE 1S—Rubber 2S—Rubber 3S—4S—Rubber 5S—Rubber 7S—Rubber 8S—Rubber 9S—Rubber 21—Rubber 29C—Cork

BASIC SPRING-LOADED DESIGNS

50,000	50,000S	250,000	350,000	370,000
				
TYPE 5L	TYPE 5S	TYPE 25	TYPE 35	TYPE 37

These are all purpose seals for most general applications. The selection of a type depends on operating conditions; thus, if the application is of moderate speed and subject to occasional lubricant starvation the leather type is ideal. However, if conditions include excessive oil flooding, higher speeds or temperatures it is necessary to select rubber types.

BASIC SPRINGLESS DESIGNS

40,000	40,000S	140,000	240,000	340,000
				
TYPE 4L	TYPE 4S	TYPE 14	TYPE 24	TYPE 34

Leather springless seals are used for retaining heavy greases, occasional oil splash, or as an auxiliary in combination with a spring-loaded seal. The springless types are not suitable for difficult sealing applications.

Various types are supplied to meet equipment design needs such as in small machinery where space is limited and low friction is required.

EXTERNAL SPRING-LOADED

80,000	80,000S
	
TYPE 8L	TYPE 8S

These types are used for relatively slow speed applications when it is desirable to press the seal on the shaft and seal on the O D, particularly for stationary shafts where grease is to be sealed.

EXTERNEL —SPRINGLESS

60,000S	160,000	260,000	360,000
			
TYPE 6S	TYPE 16	TYPE 26	TYPE 36

These designs are for sealing against the housing bore to be used with relatively slow speed applications with the lip facing outward to exclude dirt from grease applications. These types are particularly suitable when assembly problems prohibit use of shaft seals.

Seal Designs

COMBINATIONS WITH AUXILIARIES

10,000

TYPE 1L

10,000S

TYPE 1S

Used where the external conditions require the added protection of a felt auxiliary which is employed as a dust baffle.

20,000

TYPE 2L

20,000S

TYPE 2S

220,000

TYPE 22

320,000

TYPE 32

The opposed auxiliary on these types are designed for application where the shaft enters the seal from the spring-loaded side.

30,000

TYPE 3L

230,000

TYPE 23

The tandem auxiliary is for use on applications where the shaft entry is from the auxiliary side.

210,000

TYPE 21

270,000

TYPE 27

Installation of these types are to be made with the auxiliary facing outward. These are the most efficient dirt excluders for such slow speed applications as track rollers and idlers. Reverse installation permits pressure lubrication without the danger of blowing out the seal.

MULTIPLE DESIGNS

70,000

TYPE 7L

70,000S

TYPE 7S

90,000

TYPE 9L

90,000S

TYPE 9S

200,000

TYPE 20

70,000 & 70,000S

The opposed designs consist basically of two spring-loaded seals facing in opposed directions for separating two fluids.

90,000 & 90,000S

The tandem designs consist of two spring-loaded seals facing in the same direction for special operating conditions where the inner lip is needed to stem a heavy flood of lubricant or surge pressures, and the second lip is free to function under normal conditions.

200,000

Developed specifically to provide bearing protection for equipment operating in extreme dust and dirt conditions. These seals combine very low torque loss and zero leakage performance with the ruggedness and dependability demanded of seals in plow and harrow bearing positions, farm implement wheels, and similar duty applications.

FELT-METAL ENCASED

290,000

TYPE 29

For use as a dust seal on applications where the lubricant to be retained is a grease, or where it consists of an occasional oil splash and does not present any retention problems.
